Steamed Vegetable Dumplings

Zhengjiao

Makes 32 dumplings, serving 4 as a main course, 6 to 8 as a snack or starter

Whereas boiled dumplings have crinkly skins that are tender from having been immersed in hot water, and panfried dumplings have skins that are a combination of crisp bottom and chewy top, steamed dumplings are texturally in between---the skins are slightly chewy and soft. Gentle steam heat also protects the filling flavor and you taste it more, a bonus for delicate combinations such as this one.

Unlike many other Chinese dumpling fillings, this vegetarian filling is cooked first to allow the cornstarch to work its cohesive magic, binding the vegetables and pressed tofu together so that they are easier to control when you are assembling the dumplings. I like to use some of the liquid from soaking the mushrooms to season the filling with an earthy savor; if you do too, remember to strain the heady liquid through cheesecloth or paper towel to remove any bits of grit.

FILLING

- 4 cups lightly packed, coarsely chopped spinach (7 to 8 ounces)
- 4 large dried shiitake mushrooms,
reconstituted and liquid reserved, stemmed, and chopped (1/2 cup)
- 1/4 teaspoon salt
- 1/4 teaspoon ground white pepper
- 3/4 teaspoon sugar
- 1-1/2 tablespoons light (regular) soy sauce
- 2 tablespoons sesame oil
- 2 tablespoons canola oil
- 1 tablespoon finely minced fresh ginger
- 1/3 cup finely chopped carrot
- 3 ounces brown pressed tofu, finely chopped (2/3 cup total)
- 2 teaspoons cornstarch dissolved in 1 tablespoon water
- 1/2 cup chopped Chinese chives or scallions (white and green parts)

- 1 pound Basic Dumpling Dough (page 22)
- 2/3 cup Tangy Soy Dipping Sauce (page 215)

1. To make the filling, put the spinach in a large bowl. Bring a kettle of water to a boil and pour a generous amount over the spinach. Let the spinach wilt for about 30 seconds, drain, rinse with cold water, and drain again. To remove excess moisture, squeeze the spinach in your hands over the sink. When you are done, there should about 1/2 cup firmly packed spinach.

2. In a bowl, combine 1/4 cup of the reserved mushroom soaking liquid, salt, white pepper, sugar, soy sauce, and sesame oil. Stir to dissolve the sugar. Set this flavoring sauce aside.

3. In a wok or large skillet, heat the canola oil over medium heat. Add the ginger and stir-fry for about 30 seconds, until aromatic. Add the spinach, carrot, mushrooms, and pressed tofu. Stir to combine and then pour in the flavoring sauce. At first all the liquid will seem to have been absorbed, but after 2 minutes, there will be a little bubbling liquid in the skillet. At that point, give the cornstarch mixture a final stir and stir it into the filling. When the mixture thickens, turn off the heat and add the Chinese chives. Transfer to a bowl and set aside to cool completely before assembling the dumplings. You should have about 2 cups of filling. (The filling can be prepared 1 day in advance and refrigerated. Bring it to room temperature before assembling the dumplings.)

4. Form 16 wrappers from half of the dough. Aim for wrappers that are about 3-1/4 inches in diameter.

5. Before assembling the dumplings, line steamer trays or a baking sheet with parchment paper and set aside. (If you are making the dumplings in advance, or freezing them, lightly dust the parchment paper-lined tray with flour to avoid sticking.)

6. To assemble the dumplings, hold a wrapper in a slightly cupped hand. Scoop up about 1 tablespoon of filling with a bamboo dumpling spatula, dinner knife, or fork and position it slightly off-center toward the upper half of the wrapper, pressing and shaping it into a flat mound and keeping about 1/2 to 3/4-inch of wrapper clear on all sides. Then fold, pleat, and press to enclose the filling to create a half moon, pea pod, big hug, or pleated crescent shape.

If you are steaming right away, place the finished dumpling in a steamer tray, sealed side up and 1 inch away from the edge if you are using a metal steamer. Repeat with the other wrappers before forming and filling wrappers from the remaining dough, keeping the finished dumplings covered with a dry kitchen towel as you make the rest. If you don't have enough space on your steamer trays to steam all the dumplings at once, or if you are not steaming them right away, place the waiting ones on the prepared baking sheet spaced a good 1/2 inch apart.

7. Once all the dumplings are assembled, they can be covered with plastic wrap and refrigerated for several hours; they can be cooked straight from the refrigerator. For longer storage, freeze them on the baking sheet until hard (about 1 hour), transfer them to a zip-top freezer bag, pressing out excess air before sealing, and keep them frozen for up to 1 month; thaw completely on lined steamer trays, using your finger to smooth over any cracks that may have formed during freezing, before steaming.

8. To cook, steam the dumplings over boiling water for about 8 minutes, or until slightly puffed and somewhat translucent. Remove the trays and place each atop a serving plate.

9. Serve immediately with the dipping sauce, either in a communal bowl with a spoon or portioned into individual bowls or dipping sauce dishes. As with all *jiaozi*, it is easiest to eat these with chopsticks in one hand and soup spoon or rice bowl in the other, angling the bowl or spoon to catch any drips.

Basic Dumpling Dough

Makes about 1 pound, enough for 32 medium or 24 large dumplings

This dough is the foundation of many excellent dumplings, including Chinese *jiaozi*, Korean *mandu*, and Nepali *momo*. The process of making the dough is easy to master, especially with a little help from modern tools such as a food processor (though you can mix the dough by hand). Asian wheat flour wrappers may be made with cold or hot water -- the temperature is traditionally dictated by the cooking method. Boiled dumplings are said to require thicker skins made from cold-water dough in order to withstand the pressures of boiling, whereas panfried and steamed dumplings require thinner skins made from hot-water dough for their gentler cooking processes. Over the years, I've found that homemade wrappers of medium thickness, a scant 1/8 inch thick in the center and about 1/16 inch thick at the rim, work well for all cooking methods. If dumplings are gently boiled as described for *shuujiao*, there is no need for thicker wrappers. Producing medium-thick wrappers is easier with hot-water dough as it is more yielding than its cold-water counterpart. The resulting wrappers taste superior to store-bought ones, and they need no water to seal. Grocery store all-purpose flour with a moderate amount of gluten, such as Gold Medal brand, works exceptionally well.

10 ounces (2 cups) unbleached all-purpose flour
About 3/4 cup just-boiled water

1. To prepare the dough in a food processor, put the flour in the work bowl. With the machine running, add 3/4 cup of water in a steady stream through the feed tube. As soon as all the water has been added, stop the machine and check the dough. It should look rough and feel soft but firm enough to hold its shape when pinched. If necessary, add water by the teaspoon or flour by the tablespoon. When satisfied, run the machine for another 5 to 10 seconds to further knead and form a ball around the blade. Avoid overworking the dough.

Steamed Vegetable Dumplings, Page 4

2. Alternatively, make the dough by hand. Put a bowl atop a kitchen towel to prevent it from slipping while you work. Put the flour in the bowl and make a well in the center. Use a wooden spoon or bamboo rice paddle to stir the flour while you add 3/4 cup water in a steady stream. Aim to evenly moisten the flour. It is okay to pause to stir or add water -- it is hard to simultaneously do both actions. When all the water has been added, you will have lots of lumpy bits. Knead the dough in the bowl (it is not terribly hot) to bring all the lumps into one mass; if the dough does not come together easily, add water by the teaspoon.

3. Regardless of the mixing method, transfer the dough and any bits to a work surface; flour your work surface only if necessary, and then sparingly. Knead the dough (it is not hot) with the heel of your hand for about 30 seconds for machine-made dough, or about 2 minutes for handmade dough. The result should be nearly smooth and somewhat elastic: press on the dough; it should slowly bounce back, with a light impression of your finger remaining. Place the dough in a zip-top plastic bag and seal tightly closed, expelling excess air. Set aside to rest at room temperature for at least 15 minutes and up to 2 hours. The dough will steam up the plastic bag and become earlobe soft, which makes wrappers easy to work with.

4. After resting, the dough can be used right away to form the wrappers. Or, refrigerate it overnight and return it to room temperature before using.

5. Note: Recipes for hot-water dough often call for boiling water to hydrate the dry ingredients, but I find that practice too dangerous and prefer to let the water rest first. For the just-boiled water, half-fill a kettle or saucepan with water and bring it to a boil. Turn off the heat and after the bubbling action subsides, 30 to 90 seconds (depending on the heating vessel), pour the amount needed into a glass measuring cup and use for making the dough. I typically wait no more than 2 minutes after boiling to use the water.

Lazy Day Tip

You can substitute purchased wrappers for homemade ones. Medium-thick pot sticker wrappers are good for boiled, panfried, and steamed dumplings; however, they do not deep-fry well. *Sui gow* wrappers are typically made relatively thick for boiled dumplings. If your wrappers are soft and fresh but on the thick side, try rolling them to create thinner ones. A commercially made wrapper holds less filling than a homemade one, so your yield will be higher for the filling recipes here. When using store-bought wrappers, moisten the edge with water to seal them. Purchased wheat flour wrappers are best used for shaping half-moons, pea pods, pleated crescents, and big hugs, but *not* closed satchels.

Forming Wrappers from Basic Dumpling Dough

Wrappers formed from basic dumpling dough are traditionally rolled out individually by hand with a skinny wooden rolling pin. I like to cut down the work by employing a Mexican tortilla press to first quickly flatten the dough into a thin disk and then finishing the job with the skinny rolling pin. You can use some other kind of heavy, flat-bottomed object, such as a 4-cup glass measuring cup, but it will require a little more energy than the press. Regardless, have on hand two 6 to 7-inch squares of medium-heavy plastic (I cut them from a zip-top freezer bag) for the pressing. Make sure to use a spacious work surface (for example, a large cutting board), lightly dusted with flour and with about 1/4 cup of additional flour in one corner for dusting. And regardless of how you initially flatten the dough, you'll definitely need the small rolling pin to finish the wrappers. Have your filling ready to go before you start rolling, as you'll want to fill the wrappers fairly promptly after they are rolled.

1. Remove the dough from the bag, turning the bag inside out if the dough is sticky. Put the dough on a lightly floured work surface and cut it in half. Put half back in the bag, squeezing out the air and sealing it closed to prevent drying.
2. Roll the dough into a 1-inch thick log, and then cut it into the number of pieces required by the recipe. To cut even pieces, quarter the log first; the tapered end pieces should be cut a little longer than the rest. Weigh each piece of dough to be super precise, if you like. If your dough pieces are oval shaped, stand each one on a cut end and use your fingers to gently squeeze it into a round. The resulting squat cylinder resembles a scallop. This bit of advance work makes it easier to form a nice circle in the remaining steps.
3. To prevent the dough from sticking and to flatten it a bit, take each piece of dough and press one of the cut ends in flour, then flip it over and do the same on the other ends; the dough can be sticky. You should end up with a disk roughly 1/4 inch thick. As you work, set the floured disks to one side of your work area.
4. Next flatten each dough disk into a thin circle that is about 1/8 inch thick, either with a tortilla press or with a heavy, flat-bottomed object. If you are using the tortilla press, open the press and lay a plastic square on the bottom plate. Center a disk of floured dough and cover with the other plastic square. Close the top plate, then fold the pressure handle over the top plate and press down. Use moderate pressure and press only once, or the resulting wrapper will stick to the plastic and be hard to remove.

Fold back the pressure handle, open the top plate, and peel off the top plastic square. Then gently peel the wrapper off the bottom plastic square. Should the wrapper feel tacky, lightly swipe both sides on some flour before placing on the work surface.

Steamed Vegetable Dumplings, continued on Page 6

Steamed Vegetable Dumplings, Page 6

Without the tortilla press, put the floured disk between the plastic squares and press down with a heavy object to produce a circle about 1/8-inch thick. You may have to press more than once. Gently peel the plastic from the wrapper.

Regardless of method, repeat with the remaining dough pieces, setting them to one side of the work area as you finish them. It is okay to overlap the wrappers slightly.

5. To finish the wrappers, take a wrapper and place it on the work surface, flouring the surface only as needed to keep the dough from sticking. Imagine a quarter-sized circle in the center. This is what the Chinese call the “belly” of the wrapper. You want to create a wrapper that is larger than its current size but retains a thick belly. This ensures an even distribution of dough after the wrapper’s edge has been gathered and closed around the filling.

To keep a thick belly, use the rolling pin to apply pressure on the outer 1/2 to 3/4-inch border of the wrapper, as follows. Try to roll the rolling pin with the flat palm of one hand while using the other hand to turn the wrapper in the opposite direction. For example, as your right palm works the rolling pin in short, downward strokes from the center toward your body, the fingers of your left hand turn the disk counterclockwise about one-quarter of a turn between each stroke. Keep the thumb of the rotating hand near the center of the wrapper to guide the rolling pin and turn the wrapper.

If the wrapper sticks to the work surface or rolling pin, pause to dust the wrapper with flour and then continue. If you cannot get a wrapper thin enough on the first try, set it aside to relax for about 1 minute, and then roll again. Should the wrapper tear or be hopelessly misshapen, roll up the dough, let it rest for a few minutes, then press it again and roll it out. Resembling a flat fried egg, the finished wrapper does not need to be a perfect circle. Frilly edges are fine. The finished diameter of the wrapper depends on the dumpling, and each recipe provides an ideal size. Wrappers made from the Basic Dumpling Dough are moderately thick and suitable for boiled, steamed, panfried, and deep-fried morsels.

As you work, line up the finished wrappers on your work surface; if you need extra space, use a baking sheet lined with parchment paper and dusted with flour. A bit of overlapping is fine, but avoid stacking the wrappers. When a batch of wrappers is formed, fill them before making wrappers out of the other portion of dough, or the wrappers may stick together as they wait for you. Use the instructions in the recipe to fill, shape, and cook the dumplings.

Tangy Soy Dipping Sauce

Makes about 2/3 cup

Great on their own, Chinese *jiaozi* get a fantastic flavor boost when dipped in a zippy sauce like this one. The tart-salty-spicy combination adds a complex edge to the dumplings.

There's no such thing as a definitive dipping sauce, since cooks and diners mix up their own according to personal taste. At the least, your sauce should be tangy and savory. But add some nutty, hot chile oil, and your eating experience will enter a different orbit. Chinese dumplings are wonderful with an extra kick of ginger or garlic in the sauce, too. I prepare the sauce in advance, but you can set out the ingredients and invite guests to do it themselves.

1/3 cup light (regular) soy sauce

2-1/2 tablespoons unseasoned rice, *Chinkiang*, or balsamic vinegar

1/8 teaspoon sugar (optional)

1 to 3 teaspoons Chile Oil (optional)

1 tablespoon finely shredded fresh ginger, or

2 teaspoons finely minced garlic (optional)

Combine the soy sauce, vinegar, and sugar in a bowl. Stir to dissolve the sugar. Taste and adjust the flavors to your liking for a tart-savory balance. Add as much chile oil as you like for some heat. The sauce can be prepared several hours in advance up to this point. Right before serving, add the ginger or garlic for a fresh layer of punch.
